SCIENCE ON THE VERGE

A crisis looms over the scientific enterprise. Not a day passes without news of retractions, failed replications, fraudulent peer reviews, or misinformed science-based policies. The social implications are enormous, yet this crisis has remained largely uncharted – until now.

Praise for this provocative new volume in *The Rightful Place of Science* series:

"Wow. This penetrating, frightening, provocative, and irrefutable view of the debasing of science cuts to—and through—the bone. Every producer, consumer, and believer of 'science' should read this book, whether interested in pesticides, GMOs, nuclear power, climate change, psychology, or fiscal policy."

– Professor Philip B. Stark, Associate Dean, Division of Mathematical and Physical Sciences, University of California Berkeley

"A major contribution, this book approaches the current crisis of scientific practices with deep insights on the entanglement of science, policy, and ethics."

– Professor Bernadette Bensaude-Vincent, Université Paris 1, Panthéon Sorbonne

"An uncomfortable but vital diagnosis of the trouble with science. It describes valuable efforts by scientists to heal themselves, including movements for open access and social responsibility, but is clear about the limits of these endeavors. This book is certainly critical, but it is resolutely constructive."

– Professor Jack Stilgoe, Senior Lecturer, Department of Science and Technology Studies, University College London

"At last someone has said out loud that the emperor has no clothes. This is a compelling read, with pace, eloquence, and irony."

– Professor Emeritus Timothy Allen, University of Wisconsin-Madison
